COLTENE

2014/15

THE FIRST IMPRESSION COUNTS

COLTENE primarily associates prosthetics with precision impression materials, which has been one of the company's core expertise since its foundation. With Coltex®/Coltoflax®, an extensive impression program was developed back in the early 1970s, which is still valued by renowned prosthodontists to this day. The launch of PRESIDENT® the first A-Silicone on the market in 1975 is viewed as a milestone in the development of high precision dental impression materials.

Today additional cross-linking impression materials are scientifically recognized as the gold standard and are indispensable in the dental practice. The development of practical cartridge systems with significantly simplified bubble-free mixing of impression materials also contributed to their success.

Thanks to the use of surfactants with the introduction of the premium A-Silicone AFFINIS® in 2001, impression-taking in the moist environment improved enormously. The outstanding surface affinity and optimized flow properties of AFFINIS ensure perfect impressions, even under the most difficult conditions.

For more than two decades, many dentists swear by the SPEEDEX™ brand. Around 400 million impressions have been taken over this period that underline the trust placed in COLTENE's competence and expertise. The worldwide success of SPEEDEX C-Silicones lies in the outstanding mix of economy and product properties similar to those of A-Silicone.

Impression materials from COLTENE belong to today's globally leading products. Special formulas allow precise impressions to be fabricated quickly and easily. Thanks to the wide product range, the user can utilize the right material for every indication.

COMPANY

COLTENE is a global leader in the development, manufacture and sale of consumables and small-size equipment for dental treatment applications.

The Dental Group offers a wide range of products, encompassing six segments – solutions for almost all dental treatments. The complete endodontology program includes root canal preparation with files and rinsing solutions, obturation and post systems. The next extensive range is centered entirely on restorative filling therapy. This particularly includes temporary and permanent filling materials, as well as adhesive systems and polymerization. Prosthetics represents a further main area. It includes a wide spectrum of condensation and additional cross-linking impression materials. The segments of treatment aids, infection control and rotary instruments round off the program.

COLTENE has time and time again developed pioneering innovations for over 50 years, and ROEKO for over 100 years offering the user first grade dental solutions.

Today the COLTENE Group operates production facilities in Switzerland, Germany, Hungary, Brazil and the USA. It maintains a worldwide sales network with its own subsidiaries and distribution partners in over 120 countries. COLTENE therefore serves dentists, dental technicians, opinion leaders and universities with tailored quality products and services – worldwide.

Magic FoamCord

Magic FoamCord is the first expanding PVS material designed for easy and fast retraction of the sulcus without the potentially traumatic and time consuming packing of retraction cord.

*0 min** *2 min** *5 min**

Benefits

- Non-traumatic method of temporary gingival retraction
- Easy and fast application directly to the sulcus without pressure or packing
- Comfortable to the patient
- No hemostatic chemicals to contaminate the impression site – no need for extensive rinsing
- Outstanding retraction for perfect impressions

2 min: Foaming action complete; 5 min*: Material completely cured.*
Total Expansion 160 %

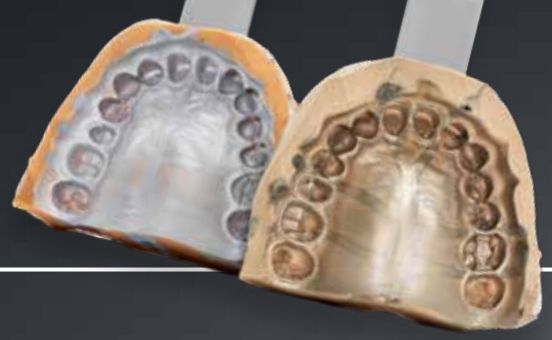
Impression

A-Silicone

Prosthetics



AFFINIS

The innovative surface affinity and optimized flow properties of AFFINIS ensure perfect impressions. The premium A-Silicone excels by virtue of fast wetting of the tooth and gingiva. Even under the most difficult moist conditions, AFFINIS flows outstandingly like a hydrocolloid into the deepest sulcus without applying pressure. Thanks to the self-contouring consistency, air voids are absent and bubbles or distortions can be virtually eliminated. The thixotropic property means that AFFINIS has adequate stability and does not drip from the tooth.

PRESIDENT

PRESIDENT the first A-Silicone has been impressive for decades with its superior quality as one of COLTENE's traditional products. PRESIDENT wash materials are stable, yet extremely free-flowing under pressure to capture all details cleanly. Impressions are precise, even under the most difficult conditions thanks to their high tear strength.

Brief description	Consistencies	
AFFINIS	**WASH**	**TRAY**
Premium A-Silicone: top quality	light body	MonoBody
Universal product range: putty, tray, 6 × wash	light body fast	heavy body
Dosage form in cartridges: 25 ml, 50 ml, 75 ml, 380 ml	PRECIOUS light body	heavy body fast
Innovative consistencies: AFFINIS PRECIOUS	regular body	putty soft
Optimal flow properties: top precision	regular body fast	putty super soft
Top dimensional stability: fitting accuracy	PRECIOUS regular body	putty soft fast
Automix: simple handling		putty System 360
Autoclavable: protection against infections		
Smallest contact angle: best wettability		
PRESIDENT	**WASH**	**TRAY**
Classical A-Silicone: continuously optimized	light body	heavy body
Two forms of mixing: Automix and Handmix	regular body	putty
Top dimensional stability: high quality		putty soft
Optimal flow properties: high precision		putty soft fast
Dosage in cartridges: 25 ml, 50 ml, 75 ml, 380 ml		
Dosage in tubes: Base and Activator each 106 ml		

JET BLUE BITE

Exceptional Handling with firm, accurate, fast set
JET BLUE BITE bite registration material flows with a smooth whipped-cream consistency exactly where you want it in a predictable quantity and ideal ribbon pattern. It offers a fast oral setting-time and sets rock hard for greater accuracy but is still flexible enough for easy trimming or cutting. The superior handling characteristics are the key for a perfect occlusal fit on the first try.

- Stays exactly where you want it
- No resistance to closure, no rebound!
- Rock hard for accuracy, yet flexible for easy trimming
- Pick your ideal speed:

Fast 30 seconds working time
40 seconds oral setting time

Superfast 20 seconds working time

Affinity on moist tooth structure

AFFINIS – a bench mark in impression technology

AFFINIS, an A-Silicone, differs in three characteristic features from other surface activated impression materials:

Innovative surface affinity

The differentiating element of AFFINIS is a fast and innovative affinity of mixed material to moist tooth structure and tissue (gingiva).

Optimized flow

AFFINIS however, based on its surpassing combination of additives which are capable of breaking material structures, displays a very low barrier to flow. The mixed material, optimally, is thixotropic enough to not drip off the preparation.

Better models

AFFINIS, due to its synergistic and extremely active surfactant system, displays a fast and outstanding wetting by water of the set impression. When pouring the gypsum, the dental technician will appreciate these properties.

First Ever Autoclavable Impressions

All AFFINIS and AFFINIS PRECIOUS impressions are now autoclavable at 134°C/273°F without the loss of its well-known and appreciated AFFINIS physical properties. The new autoclavable AFFINIS impression material with a heat-resistant impression tray and special adhesive provides an integrated system for completely new possibilities in prevention. AFFINIS impressions – not only clean, but also sterile.

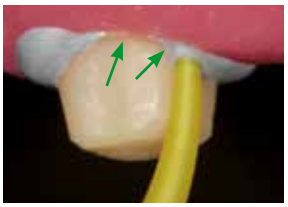
AFFINIS PRECIOUS

Superior flow properties where it counts – In the mouth…
AFFINIS PRECIOUS polyvinylsiloxane (PVS) wash materials have a contact angle of only 10°. Its superior flow properties allow the impression material to easily capture all critical surface detail of the preparations in a wet environment.

…and in the lab
AFFINIS PRECIOUS was developed to produce accurate results in the mouth and in the lab. The wettability allows the wet gypsum to flow more easily into the impression, producing more accurate stone models. An accurate model is the key for the lab technician to create proper fitting restorations.



AFFINIS PRECIOUS flows directly into the sulcus preventing air entrapments.

Thixotropic properties prevent slumping and dripping.

AFFINIS PRECIOUS wash materials produce accurate, void free impressions.

Impression

C-Silicone

Prosthetics

SPEEDEX

SPEEDEX is a premium C-Silicone in A-quality. SPEEDEX has elastic recoverability and reproduction, which is otherwise only achieved by A-Silicones. As a result of the low shrinkage, impressions remain dimensionally stable and can be cast for up to 7 days without problems.

All consistencies of SPEEDEX are mixed with a Universal Activator. Processing is flexible by means of underdosing or overdosing. After just two minutes in the mouth the impression is fully set.

RAPID

Rapid, the C-Silicone with color change for outstanding mixing control. The special wash material Rapid Liner changes color with successful mixing. Dependable mixing and the practical dispensing system simplify precise impression-taking.

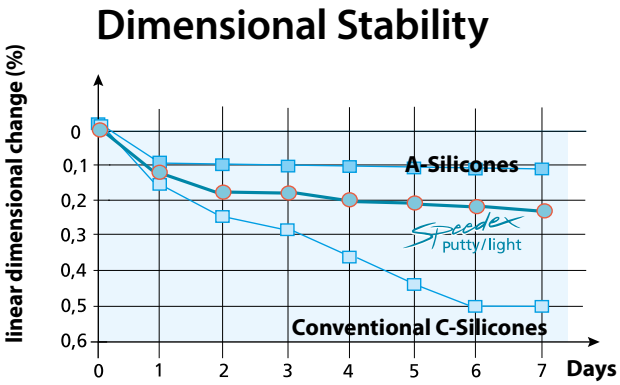
COLTOFLAX / COLTEX

With Coltoflax / Coltex began the success story of COLTENE silicones. A putty and four different consistencies, Coltoflax / Coltex offer an extensive product range. The correct material for every indication and high quality are the factors that assure the right impression.

Brief description	Consistencies	
SPEEDEX	**WASH**	**TRAY**
C-Silicone in A-Quality: top quality of the C-Silicones **High dimensional stability:** up to 7 days **Variable processing time:** depending on dosage of the activator	light body medium body	putty
RAPID	**WASH**	**TRAY**
All-in-one workstation: optimized to the user's needs **Basic product range:** 2 × putty, 1 × wash **Mixing control:** color change during mixing	Rapid Liner	Rapid Rapid soft
COLTOFLAX / COLTEX	**WASH**	**TRAY**
First silicone from COLTENE: for every indication **Extensive range:** 1 × putty, 4 × different consistencies	Coltex extrafine Coltex fine Coltex medium	Coltoflax Coltex compact

Speedex

Speedex medium has outstanding wettability and excellent flow characteristics. Saliva and blood are displaced by Speedex medium and have no negative side effects. With the variable setting time of Speedex medium the important mucosal movements, which are necessary for the full and partial denture technique, can be taken very precisely. A perfect impression is the key for an accurate fitting denture.



High dimensional stability:
models can be poured up to seven days after impression taking.

Wax

Laboratory / Practice

Acrylic

HYGENIC U-shaped occlusal rim wax

Pink wax is formulated exclusively for bite rims and the recessed base aids adaption to base plate. Can be reshaped at room temperature to fit individual arch. Block cross section is 7/16" square.

HYGENIC u-shaped occlusal rim wax		
Standard Package	21 pcs	H04030
Laboratory Package	100 pcs	H00822

HYGENIC bite-wafers

This bite-wafer contains a thin aluminium foil within two wax layers of soft bite wax which lessens distortion, preventing patient bite through. No need to heat before use. Exact occlusal registrations; correction on the occlusion on the articulator; registration of tooth positions in orthodontia; laminated, blue.

HYGENIC laminated blue bite-wafers		
Laminated	24 pcs	H00825

U-shaped design adapts to the dental arch. Single layer of bite wax. Faster and easier than impression paste materials. Gives quick precise check bites. Soft yellow bite-wafers economically low per use cost. Extra hard is non-brittle, re-hardens rapidly.

HYGENIC bite-wafers		
Yellow, soft	50 pcs	H00839
Green, extra hard	36 pcs	H03365

HYGENIC medium-soft No. 3 pink wax

Easily softened and cooled to minimize shrinkage. Soft modeling, boils out clean. Takes a high polish allowing an accurate preview of the denture or partial denture case. Excellent bite registration and quadrant checks.

HYGENIC medium-soft no. 3 pink wax	
1 lb.	H00806
5 lb.	H00812

HYGENIC red wax

This wax shows the same consistency and features and benefits as the medium-soft no. 3 pink wax, but is red in color.

HYGENIC red wax	
1 lb.	H00805
5 lb.	H00811

HYGENIC extra tough wax

Durable, all-purpose wax that is a carefully prepared blend of prime domestic and imported waxes. Tough, pliable and sufficiently tacky to hold teeth well. Takes polish and boils out. Beautiful natural pink color. Excellent for try in cases.

HYGENIC extra tough wax	
1 lb.	H00803
5 lb.	H00809

HYGENIC yellow bite wax

Economical alternative to Beeswax with many of the same characteristics. A blend of fresh clean waxes. Gives accurate impressions.

HYGENIC yellow bite wax	
1 lb.	H00807
5 lb.	H00813

HYGENIC square wax ropes

The square ropes allow a larger border area during boxing procedures. Sticky, soft and narrow wax ropes.

HYGENIC square wax ropes		
3/16" x 11" Red	44 pcs	H00819
3/16" x 11" White	44 pcs	H00820

HYGENIC round wax strips

Shaped in round strips, used for preserving the periphery roll and extending and building up impression trays and post-damming.

HYGENIC round wax strips		
3/16" x 11" Red	80 pcs	H00817
3/16" x 11" White	80 pcs	H00818

HYGENIC Plastic wax sticks

Readily formed without heating, sticks are softer and tackier than Utility and Beading Waxes to minimize tissue displacement. Adheres readily to Hydrocolloid materials.

HYGENIC plastic wax sticks		
¼" x 6" Scented	48 pcs	H00826

HYGENIC boxing wax

Designed for boxing impressions, withstands extreme heat given off by dental stones during setting.

HYGENIC Boxing wax, regular	
1/16" x 1 ½" x 12" 1 lb.	H00815
1/16" x 1 ½" x 12" 5 lb.	H00837

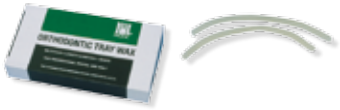
HYGENIC boxing wax, extra thin	
.04" x 1 ½" x 12" 1 lb.	H00816
.04" x 1 ½" x 12" 5 lb.	H00838

HYGENIC beeswax

Made of pure, natural beeswax with no additives. Wax softens easily under hot water. Hygenic Beeswax offers consistency and ease of bonding. Used for impressions.

HYGENIC beeswax	
.50" x 2 ⅞" x 5 ¾" ½ lb.	H00832
.50" x 2 ⅞" x 5 ¾" 1 lb.	H00833
.50" x 2 ⅞" x 5 ¾" 5 lb.	H00834

HYGENIC orthodontic tray wax sticks



Sticky, soft and narrow wax ropes. May be adapted without heating. Sticks are used for peripheral lining of trays, increasing tray height, post damming, etc. with virtually any desired impression material.

HYGENIC Orthodontic Tray Wax Sticks		
.25" x 6" x 3 ⅛" White	48 pcs	H00827

MICROLON® denture resins - heat curing

A premium denture material that responds beautifully to characterizing. Cross-linked molecular structure assures great strength and density. Due to its microfine particle, trial packing is optional.

Lab Pack 25 lb. powder, 2.5 gal. liquid	Heavy Veined	H00344
Lab Pack 25 lb. powder, 2.5 gal. liquid	Clear	H00354

HYGENIC repair resin (quick set)		
Powder only 1 lb.	Pink	H00307
Powder only 1 lb.	Veined	H00311
Powder only 1 lb.	Special Veined	H00313
Powder only 1 lb.	Clear	H00319
Liquid only 8 oz.		H00321
Liquid only 12 oz.		H00322
Liquid only 1 qt.		H00323

HYGENIC orthodontic resin

An auto-polymerizing resin used to construct orthodontic appliances and retainers. Cures in 6 to 8 minutes at room temperature. Appliances will be extremely strong, dense, color stable and easy to polish.

HYGENIC orthodontic resin		
Lab Pack 1 lb. powder, 8 oz. liquid	Clear	H02100
Lab Pack 1 lb. powder, 8 oz. liquid	Pink	H02099
Lab Pack 5 lb. powder, 1.25 qt. liquid	Clear	H02252
Lab Pack 5 lb. powder, 1.25 qt. liquid	Pink	H02253

HYGENIC orthodontic resin		
Powder only 1 lb.		H02101
Liquid only 8 oz.	Clear	H02103
Liquid only 8 oz.	Pink	H02102
Liquid only 1 qt.	Clear	H03342
Liquid only 1 qt.	Pink	H03343

HYGON® tray material

Formulated specifically for making individualized trays and stabilized base plates. Handles like a putty without elasticity or tendency to spring away from margins during adaption.

Hygon tray material		
Lab Pack 1 lb. powder, 8 oz. liquid	White	H00388
Lab Pack 1 lb. powder, 8 oz. liquid	Pink	H00389
Lab Pack 1 lb. powder, 8 oz. liquid	Blue	H00390
Lab Pack 3 lb. powder, 16 oz. liquid	White	H00391
Lab Pack 3 lb. powder, 16 oz. liquid	Pink	H00392
Lab Pack 3 lb. powder, 16 oz. liquid	Blue	H00393
Lab Pack 5 lb. powder, 1 qt. liquid	White	H00394
Lab Pack 5 lb. powder, 1 qt. liquid	Pink	H00395
Lab Pack 5 lb. powder, 1 qt. liquid	Blue	H00396

HYGENIC denture resin		
Powder only 1 lb.	White	H00403
Powder only 1 lb.	Pink	H00404
Powder only 1 lb.	Blue	H00405
Powder only 3 lb.	White	H00406
Powder only 3 lb.	Pink	H00407
Powder only 3 lb.	Blue	H00408
Powder only 5 lb.	White	H00409
Powder only 5 lb.	Pink	H00410
Powder only 5 lb.	Blue	H00411
Powder only 25 lb.	White	H02107
Powder only 25 lb.	Pink	H02108
Liquid only 8 oz.		H00415
Liquid only 16 oz.		H00416
Liquid only 1 qt.		H00417

RECON® tissue conditioner

A soft. pliable material recommended for reconditioning tissues in an edentulous mouth. Using a direct technique, apply as a denture liner to gently massage inflamed tissue. Remains soft for months. Excellent for making the most accurate functional impressions.

Recon tissue conditioner		
8 oz. powder, 6 oz. liquid	Pink	H00177
Powder only 8 oz.	Pink	H00179
Liquid only 6 oz.	Pink	H00180

FLEXIBOLE mixing bowls

Plaster, stone, investments and alginates will not sitck to these self-cleaning mixing bowls or to the nylon spatulas. (Not recommended for acrylic mixes.) More flexible than rubber bowls for more efficient mixing.

Flexibole mixing bowls	
Small (150 cc)	H00563
Medium (350 cc)	H00564
Large (600 cc)	H00565
Extra Large (850 cc)	H00566
Jumbo (1700 cc)	H00567
Spatula (box of 3)	H06012
